

WellDyneRx® Sets One Million Filling Record

A major milestone was achieved for this leader in the Pharmacy Benefit industry with the fulfillment of the one millionth prescription via robotic technology. The multi-million dollar technology investment is enhancing the practice of pharmacy while focusing on cost containment.

Centennial, Colo. – March 30, 2008 - WellDyneRx® captures the milestone of one million prescriptions filled through its customized robotics technology. The multi-million dollar technology investment has enhanced the practice of pharmacy for the Centennial-based company and allowed for the continued growth and expansion of their pharmacy benefit business.

“We are using this incredible technology to increase patient safety, improve pharmacy efficiency and set new benchmarks for quality, productivity and customer satisfaction,” states Mike Woodley, Vice President of national Pharmacy Operations for WellDyneRx. “The robot does not replace people. Rather, the robot frees up our pharmacists and pharmacy technicians, allowing more time to focus directly on patient care and less time spent counting pills.”

Many leading pharmacies are turning to this type of technology to meet the challenge of rising prescription volumes, decreasing profit margins and inconsistent quality control. The safety enhancement features are attractive as they allow pharmacies to keep closer track of orders, avoid duplication and increase safety standards. With robotics technology having an accuracy rate of 99.99%, the pharmacies utilizing this technology have the confidence they have dispensed the prescription correctly.

“We knew this investment would be an investment in our future growth,” states Susan Cain, Chief Operating Officer. “We achieved this milestone of one million prescriptions even sooner than we anticipated. Our commitment to improving health through innovation and providing our customers with incredible service is really paying off.”

WellDyne, Inc., a privately held company established in 1990, provides health improvement services through four divisions. The largest division, **WellDyneRx**, is a leader in managing prescription drug benefit programs that are designed to improve members' health while reducing overall healthcare costs. WellDyneRx currently serves their national health plan members through a network of over 58,000 retail pharmacies and a full-service mail order facility located in the Centennial, Colorado headquarters. **US Specialty Care®** is the division responsible for providing access to comprehensive specialty drug therapy for clients and members. **Cystic Fibrosis Pharmacy Service** is the division of WellDyne that manages the prescription needs of the majority of the country's CF patients. **NetCard Systems®** is the division responsible for managing the national network of retail pharmacies, including both chain and independent pharmacies. Most of the company's 125 employees are located in the Centennial headquarters. WellDyne believes in delivering innovative solutions with incredible customer service to effectively manage costs and improve healthcare outcomes.
